Examples of Blue Button 2.0 Apps

Organize and
Share

Research

- Go prepared to your next doctor visit with mobile access to all of your health records.
- Share access with family, friends, caregivers and your health plan.
- Prevent errors by helping your care providers act on consistent knowledge of your medications, allergies and other critical information.
- Securely store images and scans of health documents - Add over the counter medications and track symptoms like pain or mood.
- Be alerted to important health events - abnormal lab results, overdue vaccinations, and readings from connected smartwatches and devices.

Achievement

Organize and
Share

Research

- Achievement is a reward platform for healthy activities.
- Backed by some of the top investors in Silicon Valley and driven by a social mission to help drive scientific research forward and make America healthier, we literally pay you cash (via direct deposit or PayPal) to do healthy things like walking, eating well, and even sleeping! We also provide consumers with the opportunity to contribute to cutting edge health research.

Appointment

Understand your Medical Records & Get Telemedicine

- DrOwl is a medical platform built on patented technology that provides a safe, convenient platform to store medical records. It was built to store, organize, search, and share individualized digital medical records on demand.
- DrOwl users can also share their customized patient portal with caregivers or family members to help participate in their healthcare decisions.
- DrOwl's telemedicine services allow users to initiate telehealth sessions with the click of a button at any time. On DrOwl, users can include caregivers or family members in the secure telemedicine video call. Telemedicine only available in some areas

Find Plans

- Make shopping for Medicare plans easier by using your previous doctors, pharmacies and Medicare prescription history to help inform and expedite your Medicare health plan shopping experience with Allwell.
- Centene-branded app – 17 region/ product specific examples

Plan-to-Plan Data Exchange

For New Enrolled Members, What Could a Health Plan Do with Five (5) Years Worth of History?

Payer-to-Payer Data Exchange

- Only required with the approval and at the direction of the enrollee – consumer directed
- Only applies to CMS-regulated payers
- FHIR API is optional – health plans must “maintain a process for electronic data exchange”
- Data based on USCDI v1
- Must be able to receive and accept data
 - Can send data from other payor sources in the same form and format
